⑳ Hair cosmetic composition comprising a water soluble chitin derivative and a polyphenol.

㉑ A hair cosmetic composition comprising (A) 0.001-10% by weight of a water soluble chitin derivative, and (B) 0.00001-10% by weight of a polyphenol derivative. The hair cosmetic composition gives the hair bounce, body and volume, and good styling manageability.

EP 0 507 272 A1

Technical Field

5 This invention relates to a hair cosmetic composition, and, more particularly, to a hair cosmetic composition containing a water soluble chitin derivative and a polyphenol derivative or plant extract containing a polyphenol derivative. The hair cosmetic composition provides an excellent bounce, body and volume of the hair, and good styling manageability.

Background Art

10 Soft hair or damaged hair does not have bounce, body, nor volume. It is difficult to set-up soft hair or damaged hair. Set-up or styling manageability is one of the most important points in the art of cosmetic treatment. Various kinds of cosmetic treatments have been developed and practiced. There are several methods to give hair an appropriate wave by using hair cosmetics, for example, a permanent hair treatment wave method, a temporal hair treatment by set lotion or hair spray. The permanent wave method tends to 15 irreversibly damage healthy hair. Hair treatment by set-lotion or hair spray tends to become unset by humidity or water. These methods also give a stiff feeling to the hair.

Shampoo or conditioners containing a chitin derivative or hydrolyzed protein have been developed in order to improve styling manageability of the hair after washing the hair. But the effect is not yet sufficient.

15 It would be desirable, therefore, to provide a hair cosmetic composition which gives excellent bounce, body and volume, and good styling manageability to hair.

Disclosure of the Invention

20 Accordingly, it is an object of this invention to provide a hair cosmetic composition containing a water soluble chitin derivative which gives appropriate bounce, body and volume for good styling manageability of hair.

25 This and other objects of the invention which will become more apparent by the following description have been achieved by the use of a polyphenol derivative in combination with a water soluble chitin derivative. The resulting hair cosmetic composition gives appropriate bounce, body and volume enough for 30 good styling manageability of the hair.

Best Mode for Carrying Out the Invention

35 A hair cosmetic composition has been discovered which comprises: (A) 0.001 to 10% by weight of a water soluble chitin derivative, and (B) 0.00001 to 10% by weight of a polyphenol derivative.

The following chitin derivatives are used as chitin component (A) of the invention.

40 (1) Water soluble oligomers having more than one glucosamine monomer unit, which are obtained by degradation of chitin or chitosan. Suitable degradation methods include conventional methods of degradation, for example, the nitrous acid method, formic acid method, chlorine method, enzyme or microorganism methods, etc.

(2) Water soluble chitosan having 40-60% deacetylation ratio, which is obtained by controlling deacetylation of chitosan as described in Japanese laid-open patent application 53-47479/1978.

(3) Organic or inorganic salts of chitosan, for example, acetic acid salts, malic acid salts, citric acid salts, ascorbic acid salts, hydrochloric acid salts, sulfuric acid salts, phosphoric acid salts and the like.

45 (4) Water soluble chitin derivatives which are obtained by introducing a hydrophilic group into chitin or chitosan for example,

a) Polyoxalkylene chitin or polyoxalkylene chitosan having the following formula (I)

where a represents a number greater than one, R_1 and R_2 are H, $-COCH_3$ or $-(EO)_{p1}-(PO)_{q1}-(BO)_{r1}-H$, R_3 is H or $-(EO)_{p2}-(PO)_{q2}-(BO)_{r2}-H$, R_4 is H or $-(EO)_{p3}-(PO)_{q3}-(BO)_{r3}-H$, where $p_1, p_2, p_3, q_1, q_2, q_3, r_1, r_2, r_3$ are numbers from 0 to 5, $p_1 + q_1 + r_1 \neq 0, p_2 + q_2 + r_2 \neq 0, p_3 + q_3 + r_3 \neq 0$, EO represents an oxyethylene unit, PO represents an oxypropylene unit; BO represents an oxybutylene unit. The order of EO, PO, BO for bonding is not limited, so that PO may be bonded to the D-glucosamine unit and then the EO is bonded to the PO. Random bonding of EO, PO, BO is also possible. $R_1, R_2, R_3, R_4, p_1, p_2, p_3, q_1, q_2, q_3, r_1, r_2, r_3$, of each D-glucosamine unit may be independently selected.

b) Carboxymethyl chitin or carboxymethyl chitosan having following formula (II)

45 where b represents a number greater than one, R₅ is H or -COCH₃, R₆ and R₇ are H, -CH₂COOH, -CH₂COOM, where M is an alkali metal ion, or -CH₂COO⁻ NH₄⁺; with the proviso that R₆ and R₇ are not a hydrogen atom at the same time. R₅, R₆, R₇ of each D-glucosamine unit may be independently selected.

c) Phosphoric esters of chitin or phosphoric esters of chitosan having following formula (III)

15

where d represents a number greater than one, R₈ is H or -COCH₃, R₉ is H or -COCH₃, R₁₀ is H or

20

25

or R_{11} is H or

2

where M_1 , M_2 , M_3 and M_4 are H, alkali metal ions or ammonium ions; and R_{10} and R_{11} are not H at the same time. R_8 , R_9 , R_{10} and R_{11} of each D-glucosamine unit may be independently selected.

d) Sulfuric esters of chitin or sulfuric esters of chitosan having the following formula (IV)

40

where e represents a number greater than one, R_{12} is H or $-COCH_3$, R_{13} is H or $-COCH_3$, R_{14} is H or

55

R₁₅ is H or

5

10

where M₅ and M₆ are H, alkali metal or ammonium ions, and R₁₂, R₁₃, R₁₄ and R₁₅ of each D-glucosamine unit may be independently selected.

15

e) Dihydroxypropyl chitin or dihydroxypropyl chitosan having the following formula (V)

15

20

25

where f represents a number greater than one, R₁₆ is H, -COCH₃ or -CH₂CH(OH)-CH₂OH, and R₁₇ and R₁₈ are H or -CH₂CH(OH)CH₂OH, R₁₇ and R₁₈ are not H at the same time.

30

f) N-2-hydroxypropyl sulfonic acid chitosan having the following formula (VI)

35

40

45

where g represents a number greater than one, R₁₉ is H,

50

55

wherein M₇ and M₈ are alkali metal or ammonium ions; and R₁₉ and R₂₀ are not H at the same time.

Water soluble chitin derivatives may be obtained by the following known methods:

- (1) reacting chlorohydroxypropylene, chlorohydroxybutylene, ethylene oxide, propyleneoxide, or butyleneoxide with polyoxalkylene chitin or polyoxalkylene chitosan under ambient temperature and

pressure conditions or under conditions of 50-60°C and 1-5Kg/cm pressure; or

(2) reacting chitin or chitosan with an alkyleneoxide in an organic solvent/water mixture, under alkaline conditions. See Japanese 64-5601/1989.

5 Carboxyl chitin or carboxyl chitosan can be obtained by the reaction of alkali-chitin or alkali-chitosan with monochloroacetic acid.

Phosphoric esters of chitin or phosphoric esters of chitosan can be obtained by the reaction of chitin or chitosan dissolved or dispersed in methane sulfonate and phosphorus pentoxide with cooling of the reactant. This method is described in, for example, Japan Chemical Society 48th autumn meeting Preprint II, p. 570.

10 Sulfuric acid esters of chitin or sulfuric acid esters of chitosan are obtained by reaction of chitin or chitosan activated in pyridine with SO_3 -pyridine complex. See M.L. Volform et al., The Sulfonation of Chitosan, J. Am. Chem. Soc., vol 81, pp. 1764-1766, 1959.

Dihydroxypropyl chitin or dihydroxypropyl chitosan are obtained by reaction of epichlorhydrin with alkali-chitin or alkali-chitosan under conditions of high temperature.

15 N-2-hydroxypropyl sulfonic acid chitosan is obtained by reaction of glycidyl sulfonic acid with chitosan at high temperature, high pressure and in the presence of an alkali catalyst.

20 Preferably, polyoxyalkylene chitin or polyoxyalkylene chitosan is used for the hair cosmetic composition of this invention. More preferably, chitin derivatives having more than three (3) alkyleneoxide units per glucosamine structure is used for the hair cosmetic composition of the invention to give good bounce, body and volume of the hair. Chitin derivatives having more than four (4) moles of alkyleneoxide per glucosamine structure are most preferred.

25 Water soluble chitin derivative (A) is preferably used in the hair cosmetic composition of this invention in an amount of 0.001-10% by weight, preferably 0.01-5% by weight. The use of the water soluble chitin derivative at less than 0.001% by weight may result in an insufficiency of bounce, body and volume of the hair. The presence of the water soluble chitin derivative at more than 10% by weight may result in a stiff feeling of the hair.

30 Polyphenol derivative (B) of this invention includes compounds having more than two phenolic hydroxyl groups and derivatives thereof. It includes phloroglucinol derivatives, e.g., phloroglucinol, aspidin, aspidinol, and tannin derivatives, e.g., tannin, pyrogallol tannin, catechol tannin. Tannin derivatives are most preferable for this invention.

35 Polyphenol derivative (B) of this invention is used in an amount of 0.00001-10% by weight, preferably 0.0001-1% by weight. If the amount of component (B) is less than 0.00001% by weight, the bounce, body and volume of the hair are insufficient. If the amount of component (B) is more than 10%, the hair may become stiff.

40 Crude extracts of plants or extracts of plants containing polyphenol derivatives are used as the component (B) of the invention. Crude extracts containing tannin obtained from mimosa, quebracho, gambir-catechu, Japanese gall, nut gall, aleppo gall, Turkey gall, are preferred for use in the invention.

45 Component (B) of the present invention is obtained by extraction of plants. Examples of suitable plants include birch, rosemary, arnica, hamamelis, camomile, sage, St. John's bread, henna, hop, lime, aloe, wild thyme, calendula, horsetail, mountain gentian, nettle, chestnut, avocado, seaweed, milfoil, coltsfoot, marigold, peach, rose, senna, thyme, and white lily. Of these plants, birch, rosemary, hamamelis, camomile, sage, aloe, henna, and St. John's bread are preferable and most preferably mentioned are birch and rosemary.

50 Suitable parts of these preferred plants for the extraction are, for example, the bark of birch, the entire grass part of rosemary, the leaves of hamamelis, the leaves of sage, the leaves of aloe, the leaves of henna, and the fruit of St. John's bread.

The plant extract is obtained by extracting flowers, leaves, fruits, roots, stems and the like with solvent at ambient temperature or with heating according to any known extraction technique. The extraction solvents are preferably polar organic solvents including, for example, lower alcohols (C_1-C_6) such as 55 methanol, ethanol and the like, C_2-C_6 alkylene glycols such as propylene glycol, 1,3-butylene glycol and glycerin, and water. These solvents may be used singly or in combination.

The extracts of birch and rosemary which are the most preferable plants are commercially available. The commercially sold birch extracts include Birch Extract made by Novarom Co., Ltd., Boulene MCF787 by Gattefosse Co., Ltd., Birch Extract by Virmin Co., Ltd., Birch Extract by Nowak Co., Ltd., Extrapone Birch Special by Dragoco Co., Ltd., and the like. Suitable as rosemary extracts are Rosemary Extract by Novarom Co., Ltd., Romarin MCF772 by Gatt fosse Co., Ltd., Phytelene EG009 by Virmin Co., Ltd., and Rosemary Extract by Nowak Co., Ltd.

When the plant extract is in a liquid form, component (B) is used in an amount ranging from 0.001 to

5% by weight, preferably 0.01 to 1.0% by weight of the total composition, calculated as a ratio obtained after distillation of extraction solvent. If the amount of the plant extract is less than 0.001% by weight, the effect of the invention is insufficient. If the amount of the plant extract is more than 5% by weight, the hair may become stiff.

5 The component (B) or plant extract may be directly added to hair cosmetic compositions in the form of a liquid extract, may be added after concentration to a desired level or after complete removal of extraction solvent from the extract.

Besides the two essential components, various components commonly known for use in a cosmetic composition, detergent composition, medical composition or food, can be formulated to the extent that the effects of the present invention are not adversely affected. Such optional components include, for example, 10 an anionic surfactant, e.g., alkylsulfate, polyoxyethylene alkylsulfate, alpha-olefin alkylsulfate, sulfosuccinic acid half ester, acyl glutamate, monoalkyl phosphate, soap; amphoteric surfactant, e.g., amidoamino acid, alkylbetaine; cationic surfactant, e.g., alkyl quaternary ammonium salt; fats and oils, e.g., silicone derivatives, perfluoropolyether, ester oils, higher alcohol; water; moisture retaining agent, e.g., glycerin, propylene 15 glycol; pharmaceutical component, e.g., anti-inflammatory agent, anti-dandruff agent, vitamin; antiseptics, e.g., hydroxybenzoic acid, urea; thickening agent, e.g., water soluble polymer; UV absorber, e.g., oxybenzone; 20 antioxidant agent, e.g., dibutyl hydroxytoluene; tocopherol acetic acid ester; coloring agent, e.g., dyestuff, pigment; conditioning agent, e.g., cationic polymer; paraffin like component, e.g., glycol ester; hair setting polymer such as acryl resin; perfumes; and component disclosed in **ENCYCLOPEDIA OF CONDITIONING RINSE INGREDIENTS** (MICELLE PRESS, 1987).

The hair cosmetic composition of the present invention can be prepared in liquid, paste, solid, powder, cream, aerosol or any other forms, according to conventional methods by using component (A) and (B). The term "hair cosmetic composition" includes hair treatment compositions, shampoo compositions, hair rinse compositions, after shampoo compositions, hair conditioners, set lotions, blow styling lotions, hair sprays, 25 hair dyes, bleaches, permanent wave 1st agents, permanent wave 2nd agents, hair coloring agents, hair liquids, and hair tonics.

Other features of the invention will become apparent in the course of the following descriptions of exemplary embodiments which are given for illustration of the invention and are not intended to be limiting thereof.

30 Examples

Example 1

35 Shampoo compositions were prepared according to the formulations listed in Table 1. Each composition was tested in terms of its bounce, body and volume after washing and drying.

Evaluation method and standard

40 In the evaluation, 1g of sample composition was applied to a bundle of hair (Weight: 20g, length: 15cm) of a healthy Japanese women. Bounce, body and volume of the hair were determined after the shampoo was foamed for 1 minute, rinsed and dried by hair drier. Bounce, body and volume of the hair were evaluated by 10 expert panelists according the following standards.

45 Bounce, body of the hair

AA	- substantial bounce and body of the hair
BB	- moderate bounce and body of the hair
CC	- slight bounce and body of the hair
50 DD	- poor bounce and body of the hair

Volume of the hair

AA	- substantial volume of the hair
BB	- moderate volume of the hair
CC	- slight volume of the hair
55 DD	- poor volume of the hair

		100 wt %

40 The hair cosmetic composition of this invention provides hair with good bounce, body and volume and good hair styling manageability, and is useful as a hair treatment, hair conditioner, shampoo or rinse.

Obviously, numerous modifications and variations of the present invention are possible in light of the above teachings. It is therefore to be understood that within the scope of the appended claims, the invention may be practiced otherwise than as specifically described herein.

45 **Claims**

1. A hair cosmetic composition, comprising:
 - (A) a water soluble chitin derivative, and
 - (B) a polyphenol derivative.
2. The hair cosmetic composition according claim 1, comprising 0.001-10% by weight of said water soluble chitin derivative.
3. The hair cosmetic composition according claim 1, comprising 0.01-5% by weight of said water soluble chitin derivative.
4. The hair cosmetic composition according claim 1, comprising 0.1-1% by weight of said water soluble chitin derivative.

chitin derivative.

5. The hair cosmetic composition according claim 1, comprising 0.00001-10% by weight of said polyphenol derivative.
6. The hair cosmetic composition according claim 1, comprising 0.0001-1% by weight of said polyphenol derivative.
- 10 7. The hair cosmetic composition according claim 1, wherein said water soluble chitin derivative is a polyoxyalkylene chitin or polyoxyalkylene chitosan.
8. The hair cosmetic composition according claim 7, wherein said water soluble chitin derivative is a polyoxyalkylene chitin or polyoxyalkylene chitosan having more than three oxyalkylene units per glucosamine unit of the chitin derivative.
- 15 9. The hair cosmetic composition according claim 1, wherein said polyphenol derivative is selected from the group consisting of a phloroglucinol derivatives and tannin derivatives.
- 10 10. The hair cosmetic composition according claim 9, wherein said polyphenol derivative is a tannin derivative.
11. The hair cosmetic composition according claim 1, wherein said polyphenol derivative is a plant extract containing a polyphenol derivative.
- 25 12. The hair cosmetic composition according claim 11, wherein said plant extract is selected from the group consisting of a birch extract, a rosemary extract, a hamamelis extract, a camomile extract, a sage extract, an aloe extract, a henna extract, and a St. John's bread extract.
- 30 13. The hair cosmetic composition according claim 12, wherein said plant extract is a birch extract or a rosemary extract.
14. The hair cosmetic composition according claim 11, comprising 0.001-5.0% by weight of said plant extract.
- 35 15. The hair cosmetic composition according claim 14, comprising 0.01-1.0% by weight of said plant extract.
16. The hair cosmetic composition according claim 14, comprising 0.1-0.5% by weight of said plant extract.
- 40 17. A method for improving the bounce, body and volume of hair comprising contacting hair with a hair cosmetic composition comprising:
 - (A) a water soluble chitin derivative and
 - (B) a polyphenol derivative.
